

FRCM FABRIC REINFORCED CEMENTITIOUS MATRIX

The integrity of your foundation is our specialty. Guaranteed.

FOUNDATION REPAIR AND SEISMIC STRENGTHENING

The Next Generation of Composite Strengthening Systems™ for Concrete and Masonry Structures.

FRCM or Fabric-Reinforced Cementitious Matrix combines a high-performance sprayable mortar with a carbon-fiber grid to create a thin structural layer that will not add significant weight or volume to the existing structure.

Repair, protect and strengthen aging, damaged or overloaded concrete and masonry structures in one application and significantly reduce your project cost. FRCM is the most cost-effective foundation repair and seismic strengthening method industry-wide. FRCM can be used on all types of masonry foundations. Concrete, Terra-cotta, Brick, CMU (block), reinforced, unreinforced and combination foundations.

This state-of-the-art foundation repair technology allows us to repair, seismically retro-fit and strengthen aging and deteriorating foundations and masonry structures in a very short period of time.

Significant flexural, axial or shear strength gains can be achieved with an easy-to-apply composite that does not add significant weight or mass to the structure. FRCM provides a low-impact, low-weight alternative to traditional concrete strengthening and retrofit methods. Many times, it is the most economical strengthening solution available, given its reduced preparation and installation time.

WCS provides completely free assessments and proposals for foundation repair and retrofit projects.

NOW YOU CAN REPAIR AND STRENGTHEN IN ONE SHOT!
